                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-09-019-497-84

US-09-019-497-84

Sequence 84, Application US/09919497

Patent No. 6773883

GENERAL INFORMATION:

APPLICANT: Mutter, George L.

TITLE OF INVENTION: PROGNOSTIC CLASSIFICATION OF ENDOMETRIAL CANCER

FILE REFRENCE: B0801/7225

CURRENT APPLICATION NUMBER: US/09/919,497

CURRENT FILING DATE: 2001-07-31

PRIOR APPLICATION NUMBER: US 60/221,735

PRIOR APPLICATION NUMBER: US 60/221,735

NUMBER OF SEQ ID NOS: 100

SOFTWARE: PATENTIN US FAILURED DATE: 2000-07-31
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

APPLICANT: Chen, Ping

TITLE OF INVENTION: MUTACIN I BIOSYNTHESIS GENES AND PROTEINS

FILE REFERENCE: UAB-17403/22

CURRENT FILING DATE: 2002-01-14

PRIOR APPLICATION NUMBER: US 09/627,376

PRIOR PLING DATE: 2000-07-28

NUMBER OF SEQ ID NOS: 19

SOFTWARE: Patentin version 3.2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

Patent No. 6747137
GENERAL INFORMATION:
APPLICANT: Keith Weinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    US-09-673-395A-467

Patent No. 6605709

GENERAL INFORMATION:
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS

TITLE REFERENCE: 2709.1002-001

CURRENT APPLICATION NUMBER: US/09/543,681A

CURRENT PILLING DATE: 2000-04-05
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                    GENERAL INFORMATION:
APPLICANT: Homburger et al.

Sequence 48177, Application US/09270767

Patent NO. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nuclear acids and proteins of Drosophila melanogaster FILE REFERENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT PILING DATE: 1999-03-17

SOFTWARE: Patentin Ver. 2.0

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

LENGTH: 189

                                                                                                       ઠ
                                                                                                                           셤
                                                                                                              This_sequence represents a fragment of the amyloid beta peptide. The invention relates to the use of peptide compounds for inhibition of polymerisation of amyloid beta peptide (ABP), as model substances for synthesis of ABP-ligands for inhibition of polymerisation of ABP, as a col for the identification of other organic compounds with similar tool for the identification of other organic compounds with similar functional properties, or as ligands in positron emission tomography. The peptides may be used in treatment of amyloidosis, specially in treatment or prevention of demens in patients with Down's syndrome, for treatment or prevention of hereditary cerebral haemorrhage with amyloidosis (Dutch type) or for the prevention of fibril formation of human amyloid protein. They can also be used for identifying other molecules with similar properties and/or as ligands for detection of amyloid deposits using e.g. postfirn emission tomography. Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid desposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 ware identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid

                                                                                                                                                                                                                                                                                                              Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                                                                                                                                                                                                           Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide, its isomer or peptidomimetic.

The present sequence is that of an all-D peptide suitable for use in preparing vaccines for preventing or treating Alzheimer's disease and cother ammior related disorders in humans. It is based on a portion of amyloid-beta peptide (see AAB82622), and may be modified by removing or inserting 1 or more amino acid residues, or by substituting 1 or more amino acid residues or non-amino acid fragments. Vaccines of the invention acid residues or non-amino acid fragments. Vaccines of the invention acid residues or non-amino acid fragments. Vaccines of the invention acid residues or non-self.

C peptides synthesised from the unnatural D-configuration amino acids to avoid the drawbacks of 'self' proteins. The all-D peptides need not be aggregated to be operative or immunogenic. They preferably interact with at least 1 region of an amyloid-beta peptide, or their immunogenic at least 1 region, the amyloid-beta peptide, or their immunogenic fragments, protein conjugates, immunogenic derivative peptides and immunogenic peptidemimetics. Examples include all-D peptides and immunogenic peptidemimetics. Examples include all-D peptides and cimmunogenic peptidemimetics. Examples include all-D peptides or their immunogenic peptidemimetics a preferential TH-2 or TH-1 response, or JA-40, 1-35, 1-28, 1-7, 10-16, 16-21 and corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-31 and corresponding to residues and associated cellular toxicity. The amyloid corresponding fibrillogenesis and associated cellular toxicity. The amyloid cellular corpus protein related diseases, e.g. bowine spongiform encephalitis, created diseases, e.g. disorders, or systemic amyloidosis associated with correct infection (e.g. tuberculosis) or chronic manadoud archiritis, amyloidosis patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Preventing/treating amyloid-related disease, especially Alzheimer's disease, comprises administering antigenic all-D peptide, eg. as vaccine, which elicits production of antibodies to prevent fibrillogenesis and associated cellular toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

The invention relates to an amyloid-targeting imaging agent comprising an amyloid targeting moiety, a linker moiety and a labelling moiety. The gant is of general formula At-(A_ln, K_z-A_la_b(1) where z = 0 - 1; At = an amyloid targeting moiety. Also included are Imaging amyloid deposition or diagnosing an amyloid-related condition in a patient involving channistering (1) to the patient, and ultrasound imaging (1) in the patient to determine the presence of amyloid or amyloid-related condition or administering (1) to the patient, a buffering agent, a transchelating agent, and instructions for the preparation and use of the radiopharmaceutical in condition agent, a mayloid or an amyloid-related condition and for instructions for the preparation and use of the radiopharmaceutical in cused for imaging amyloid deposition and for diagnosing an amyloid related condition e.g. Creutzfeldt-Jakob disease (CUD), kuru, transmissible cerebral amyloidoses (transmissible virus dementias), familial CUD, creepral amyloidoses (transmissible virus dementias), familial CUD, creepral amyloidosis, faline spongiform encephalopathy, montransmissible cerebral amyloidosis, light chain-related amyloidosis, creebral amyloidosis, light chain-related amyloidosis, corebral amyloidosis, light chain-related amyloidosis, corebral amyloidosis, lond angiopathy. The agents are capable of crossing the blood-brain charrier and are capable of corosing the amyloid plaques. The present sequence is a peptide forming the amyloid targeting moiety of the present sequence is a peptide forming the amyloid targeting moiety of the constitution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New amyloid-targeting imaging agents useful for in vivo imaging amyloid plaques and/or for the treatment of amyloidosis disorders.
                                                                     Amyloid; imaging agent, Creutzfeldt-Jakob disease; Kuru, CJD; transmissible cerebral amyloidosis; transmissible virus dementia; scrapie; transmissible mink encephalopathy; BSE; type II diabetes; bovine spongiform encephalopathy; inflammation associated amyloid; primary amyloidosis; feline spongiform encephalopathy; Alzheimer's disease; prion-mediated disease; blood-brain barrier; dialysis-related amyloidosis; light chain-related amyloidosis; cerebral amyloid anglopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       1. .4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is that of an all-D peptide suitable for use for preparing vaccines for preventing or treating Alzheimer's disease and other amyloid related disorders in humans. It is based on a portion of amyloid-beta peptide (see AABS262), and may be modified by removing or inserting 1 or more amino acid residues, or by substituting 1 or more amino acid residues with other amino acid residues or non-amino acid fragments. Vaccines of the invention are produced using 'non-self' peptides synthesised from the unnatural D-configuration amino acid to avoid the drawbacks of 'self' proteins. The all-D peptides need not be aggregated to be operative or immunogenic. They preferably interact with at least 1 region of an amyloid protein, e.g. the beta-sheet region or GAG-binding site region, the amyloid-beta peptide, or their immunogenic immunogenic peptidemimetics. Examples include all-D peptides and immunogenic peptidemimetics. Examples include all-D peptides and corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and 16-26-42. The vaccine elicits a preferential TH-2 or TH-1 response, or AABS2633-64. The vaccine elicits a preferential TH-2 or TH-1 response, or share disease may be localised amyloidosis, e.g. diabetes type II, cheurodegenerative disease, e.g. bovine spongiferm encephalitis, creatzfeldt-Jakob disease, scrapie, cerebral amyloid angiopathy, and corrent infection (e.g. tuberculosis) or chronic infection (e.g. tuberculosis) 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Preventing/treating amyloid-related disease, especially Alzheimer's disease, comprises administering antigenic all-D peptide, eg. as vaccine, which elicits production of antibodies to prevent fibrillogenesis and associated cellular toxicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU11169) AAU11911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor cerebral amyloid angiopathy (CAA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Peptide #14, used as carrier for the amyloid-beta40 (Abeta40) inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 4;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an amyloid-targeting imaging agent comprising an amyloid targeting moiety, a linker moiety and a labelling moiety. The cagent is of general formula At-(Allnk) z-Allab [1] where z = 0 - 1;

At = an amyloid targeting moiety. Allo k = Inker moiety; and Allab c = a labelling moiety. Also included are imaging amyloid deposition or diagnosing an amyloid-related condition in a patient involving administering (I) to the patient, and ultrasound imaging (I) in the patient to determine the presence of amyloid or amyloid-related condition is and a kit for preparation are dispharmaceutical preparation comprising (I), a reducing agent, a buffering agent, a transchelating agent, and instructions for the preparation and use of the radiopharmaceutical in the imaging amyloid or an amyloid-related condition. The agents are used for imaging amyloid deposition and for diagnosing an amyloid deposition and for diagnosing an amyloid deposition or cerebral amyloidoses (transmissible virus dementias), familial CJD, cerebral amyloidosis, feline spongiform encephalopathy, non-transmissible cerebral amyloidosis, feline spongiform encephalopathy, non-transmissible cerebral amyloidosis, light chain-related amyloidosis, light chain-related amyloidosis, light chain-related amyloidosis, and are capable of crossing the blood-brain amyloid angiopathy. The agents are capable of crossing the blood-brain contraction and are capable of angiotally to amyloidosis, and are capable of angiotally and angiotales.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                present sequence is a peptide forming the amyloid targeting molety of the agent of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New amyloid-targeting imaging agents useful for in vivo imaging amyloid plagues and/or for the treatment of amyloidosis disorders.
                                                                                                                                                                                                                                                                                                                                      bovine spongiform encephalopathy; inflammation associated amyloid, primary amyloidosis; feline spongiform encephalopathy; Albaimer's disease; prion-mediated disease; blood-brain barrier; distanted amyloidosis; light chain-related amyloidosis; cerebral amyloid angiopathy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid angiopathy, particularly Alzheimer's disease, hereditary cerebral amyloid memorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU1669, AAU1910 & AAU1911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor was used in the invention to treat a disease state characterised by cerebral amyloid anglopathy (CAA)
                                                                                                                     Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                               Peptide #6, used as a carrier for the amyloid-beta40 (Abeta40) inhibitor.
                                                                                                                                                                                                                                                                                                                                           Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40 inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          All-D-amyloid-beta peptide, Alzheimer's disease, rheumatoid arthritis, cerebral amyloid angiopathy, amyloid disease, ankylosing spondylitis; psoriasis, Reiter's syndrome; Adult Still's disease, Bechet's syndrome;

The invention relates to a method for prevention and/or treatment of an anyloid-related disease which comprises administration of an all-D-amyloid-beta peptide. The method is used for preventing and/or treating cardiolates and other amyloid related disease e.g. cerebral amyloid angiopathy; for altering serum levels of amyloid-beta a mammal and cardiolates the clearance of soluble amyloid-beta or fibril amyloid-beta from the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including cardiolates anyloid seases e.g. rheumatoid arthritis, juvenile chronic arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, cathritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, cathritis, ankylosing spondylitis, psoriasis, brondic microbial infections (preferably leprosy, tuberculosis, brondiectasis, decubitus infections (preferably leprosy, tuberculosis, brondiectasis, decubitus culcers, chronic pyelonephritis, osteomyelitis and Whipple's disease).

Certain malignant neoplasms can also result in AA fibril amyloid deposits cincluding Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The invariant sequence is an Abeta peptide used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     All-D-amyloid-beta peptide; Alzheimer's disease; rheumatoid arthritis; cerebral amyloid angiopathy; amyloid disease; ankylosing spondylitis;
Crohn's disease; infection; leprosy; tuberculosis; carcinoma; nootropic chronic pyelonephritis; osteomyelitis; Whipple's disease; vasotropic; Hodgkin's lymphoma; neuroprotective; bronchiectasis; ophthalmological; ulcer; antiinflammatory; cytostatic; uropathic; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Prevention and/or treatment of an amyloid-related disease e.g. Alzheimer's disease, comprises use of all-D-amyloid-beta peptides.

The invention relates to a method for prevention and/or treatment of an amyloid-related disease which comprises administration of an all-D amyloid-beta peptide. The method is used for preventing and/or treating Alzheimer's and other amyloid related disease e.g. cerebral amyloid angiopathy; for altering serum levels of amyloid-beta in a mammal and favours the clearance of soluble amyloid-beta or fibril amyloid-beta from the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including carbinists, ankylosing spondylitis, psoriasis, psoriatic arthropathy, Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's Gisease. AA deposits are also produced as a result of chronic microbial inflemmanch (preferably leprosy, tuberculosis, bronchiectasis, decubitus culcers, chronic pyelonephritis, osteomyelitis and Whipple's disease). Certain malignant neoplasms can also result in AA fibril amyloid deposits including Hoddkin's lymphoma, renal carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the
psoriasis; Reiter's syndrome; Adult Still's disease; Bechet's syndrome; Crohn's disease; infection; leprosy; tuberculosis; carcinoma; nootropic; chronic pyelonephritis; osteomyelitis; Whipple's disease; vasotropic; Hoddkin's lymphoma; neuroprotective; bronchiectasis; ophthalmological; ulcer; antiinflammatory; cytostatic; uropathic; therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Prevention and/or treatment of an amyloid-related disease e.g. Alzheimer's disease, comprises use of all-D-amyloid-beta peptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         100.0%; Score 19; DB 6; L

The present invention describes compositions (C) comprising: (a) a first agent (a1) that prevents or treats amyloid-beta related disease, and (b) as second agent (a2) that is: (i) a peptide or peptidomimetic that conducts a modulates amyloid-beta fibril formation or induces a prophylactic or therapeutic immune response against amyloid-beta fibril formation; or therapeutic immune response against amyloid-beta fibril formation; or therapeutic immune system modulator that prevents or inhibits amyloid-beta fibril formation. Also described is a kit comprising (C). (C) have notionable of anticonvolsant, antichyroid, vasotropic, cardiovascular, tranquilliser, uropathic, anticonvolsant, antichyroid, vasotropic, cardiovascular, tranquilliser, cardiothic, anticonvolsant, endocrine and hypnotic activities, and can be used as amyloid-beta fibril formation modulators, and as modulators. (C) can be used for preventing or treating an amyloid-beta related disease e.g. Alzheimer's disease (including sporadic (non-hereditary) or familial (hereditary)), mild cognitive impairment, amild-to-moderate cognitive impairment, vascular dementia, cardiovascular amild-to-moderate cognitive impairment, vascular dementia, cardiopathy, hereditary cerebral haemorrhage, senile dementia, amyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, condition associated with Alzheimer's disease.

(including hypothyroidism, cerebrovascular disease, cardiovascular disease, memory loss, anxiety, a behavioural dysfunction (e.g. apathy, aggression, or incontinence), a neurological condition (e.g. thurington's disease, amyotrophic lateral selecosis, acquired immunodeficiency, barkinson's disease, aphasia, apraxia, agnosia, pick disease, dementia with Lewy bodies, altered muscle tone, seizures, sensory loss, visual cattack or stroke, transient alerthess, attention deficit, frequent falls attend to substant alerthess, attention deficit, frequent falls attend the condition as a transent learness, attention deficit, frequent falls attend the condit

(int) an immune system modulator that prevents or intilotts amyloud-beta fibril formation. Also described is a kit comprising (C). (C) have nootropic, neutroprotective, haemostatic, contropic, antichyroid, vasotropic, cardiovascular, tranquilliser, urcopathic, antichyroid, antichyroid, antichyroid, antichyroid, antidepressant, endocrine and hypnotic activities, and can be used as amyloid-beta fibril formation modulators, and as anyloid-beta related disease e.g. Alzheimer's disease (including sporadic (non-hereditary) or familial (hereditary)), mild cognitive impairment, vascular dementia, cerebral anyloid-beta related disease e.g. Alzheimer's disease (including sporadic (non-hereditary) or familial (hereditary)), mild cognitive impairment, vascular dementia, cerebral anyloid-beta related modilary cerebral haemorrhage, senile dementia, anyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, cown's syndrome, inclusion body myositis, age-ralated macular degeneration, or a condition associated with Alzheimer's disease.

C(including hypothyroidism, cerebrovascular disease, cardiovascular disease, memory loss anxiety, a behavioural dysfunction (e.g. Huntington's disease, anytorophic lateral sclerosis, acquired immodeficiency, parkinson's disease, aphasia, apraxia, agnosia, pick disease, dementia with Lewy bodies, altered muscle tone, seizures, sensory loss, visual field deficits, incoordination, gait disturbance, transient fall cardion, aptachementa, brain tumour, posttraumatic brain injury, or posthypoxic catack, transient alertness, attention deficit, frequent falls anged), or a psychological condition (e.g. depression, depressed mood, irritability, anhedonia, social withdrawal, or excessive quilt)) in a subject e.g. human having a genomic mutation in an amyloid precursor protein gene, an Apos gene, or a presentisation opetide which is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

셤 degeneration, or a countion absociated with Arimemmer B unsequence disease, memory loss, anxiety, a behavioural dysfunction (e.g. apathy, aggression, or incontinence). a neurological condition (e.g. apathy, disease, amyotrophic lateral sclerosis, acquired immunodeficiency, lateral solerosis, acquired immunodeficiency, with Lewy bodies, altered muscle tone, seizures, sensory loss, visual field deficits, incoordination, gait disturbance, transient ischaemic attack or stroke, transient alertness, attention deficit, frequent falls, syncope, neuroleptic sensitivity, normal pressure hydrocephalus, subdural camentoma, brain tumour, postrraumatic brain injury, or posthypoxic damage), or a psychological condition (e.g. depression, delusions, disturbance, insomnia, behavioural disinhibition, post insight, suicidal deation, depressed mood, irritability, anhedonia, social withdrawal, or excessive guilt) in a subject e.g. human having a genomic mutation in an emyloid-beta deposits. The present sequence represents a peptide that can be used as an antifibrillogenic amyloidosis inhibiting peptide con the present invention. agent (a1) that prevents or treats amyloid-beta related disease; and (b) a second agent (a2) that is: (i) a peptide or peptidomimetic that modulates amyloid-beta fibril formation or induces a prophylactic or therapeutic immune response against amyloid-beta ibril formation; or therapeutic immune response against amyloid-beta aprophylactic or therapeutic immune system modulator that prevents or inhibits amyloid-beta fibril formation. Also described is a kit comprising (C). (C) have nootropic, neuroprotective, cerebroprotective, haemostatic, ophthalmological, antithyroid, vasotropic, cardiovascular, tranquilliser, curopathic, anticonvollant, antidepressant, endocrine and hymotic activities, and can be used as amyloid-beta fibril formation modulators, and as immune system modulators. (C) can be used for preventing or treating an amyloid-beta related disease e.g. Alzheimer's disease (including sporadic (non-hereditary) or familial (hereditary)), mild cognitive impairment, amild-to-moderate cognitive impairment, vascular dementia, cerebral amyloid angiopathy, hereditary cerebral haemorrhage, senile dementia, complish the syndrome, inclusion body myositis, age-related macular (c) degeneration, or a condition associated with Alzheimer's disease Composition for treating e.g. Alzheimer's disease comprises first agent that prevents or treats amyloid-beta related disease and second agent that is either a peptide or peptidomimetic or an immune system modulator. present invention describes compositions (C) comprising: (a) a first

disease, memory loss, anxiety, a behavioural dysfunction (e.g. apathy, aggression, or incontinence), a neurological condition (e.g. Huntington's disease, amyortrophic lateral sclerosis, acquired immunodeficiency, parkinson's disease, aphasia, apraxia, agnosia, pick disease, dementia with Lewy bodies, altered muscle tone, seizures, sensory loss, visual continuous incondination, gait disturbance, transient ischaemic attack or stroke, transient alertness, attention deficit, frequent falls, syncope, neuroleptic sensitivity, normal pressure hydrocephalus, subdural canned, brain tumour, posttraumatic brain injury, or posthypoxic damage), or a psychological condition (e.g. depression, delusions, illusion, hallucination, sexual disorder, weight loss, psychosis, a sleep disturbance, insomnia, behavioural disinhibition, poor insight, suicidal ideation, depressed mood, irritability, anhedonia, social withdrawal, or excessive guilt) in a subject e.g. human having a genomic mutation in an amyloid precursor protein gene, an ApoE gene, or a presentlin gene; having amyloid-beta deposits. The present sequence represents a peptide that can be used as an antifibrillogenic amyloidosis inhibiting peptide tin the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cerebrovascular disease; cardiovascular disease; memory loss; anxiety; behavioural dysfunction; neurological condition;

The present invention describes compositions (C) comptising: (a) a first agent (a) that prevents or treats amyloid-beta related disease; and (b) a second agent (a) that is: (i) a peptide or peptidomimetic that modulates amyloid-beta fibril formation or induces a prophylactic or modulates amyloid-beta fibril formation or induces a prophylactic or therapeutic immune system modulator that prevents or inhibits amyloid-beta fibril formation. Also described is a kit comprising (C): (C) have contropic, neuroprotective, cerebroprotective, haemostatic, tranquilliser, uropathic, anticomulatar, antidepressant, endocrins and hypnotic activities, and can be used as amyloid-beta fibril formation modulators (C) can be used for preventing or treating an can be used as amyloid-beta fibril formation modulators and as immune system modulators (C) can be used for preventing or treating an can be used as amyloid-beta fibril formation modulators, and as immune system modulators (C) can be used for preventing or treating an immune system modulators (C) can be used for preventing or treating an immune system modulators (C) can be used for preventing or treating an immune system modulators (C) can be used for preventing or treating an immune system modulators (C) can be used for preventing or treating or impleted angiorably preceditary or a condition associated with Alzahimer's disease (including hypothyroidism, cerebral haemorrhage, senile dementia, own's syndrome, inclusion body myositis, age-related macular disease, amyotrophic lateral solerosis, acquired immunodeficiency, also modulation session also also and the pressure hydrocephalus, subdural field deficits, incoordination, gair disturbance, transient ischaemic and muscle ton, descasse, dementia and pressure professes and modulation, sexual disorder, weight loss, psychosis, a sleep damages), or a psychological condition session deficit, frequent described macula disorder, weight loss, psychological conditions, seizures, second weight, with a described present geneitivity, normal
                                                                                                                               Composition for treating e.g. Alzheimer's disease comprises first agent that prevents or treats amyloid-beta related disease and second agent that is either a peptide or peptidomimetic or an immune system modulator.
                                                                                                                                                                                                                                                                  The present invention describes compositions (C) comprising: (a) a first

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
```

```
Partial sequence of amyloid beta peptide critical for its polymerisation.
                                                                                                                                                                                                                                              AAW02110-W02332 represent the peptide portions of the beta-amyloid modulator compounds of the invention. Beta-amyloid peptide is a 4 kilodalton peptide that is the major protein component of amyloid plaques. Amyloid plaques are present both in the brain lesions, and in the walls of cerebral blood vessels in Alzheimer's disease patients. The amyloid modulators of the invention comprise an amyloidogenic protein or peptide (such as this sequence) coupleted a majoldogenic protein or peptide (such as this sequence) coupletcily or indirectly to at least one modifying group. The modifying group is preferably a cyclic, heterocyclic, or polycyclic group, such as declain, a cholanyl group, a biotin containing group, or a fluorescein containing group. These compounds then modulate the aggregation of these sequences to natural amyloid proteins or peptides when contacted with the natural
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                amyloidogenic proteins or peptides. The modulator compounds can be used in the treatment of disorders associated with amyloidosis, such as familial amyloid cardiomyopathy, isolated cardiac amyloidosis, systemic senile amyloidosis, scrapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, adult-onset diabetes, insulinoma, familial Mediterranean fever, familial amyloid nephropathy with urticaria and deafness, hereditary cerebral hasmorrhage and other types of amyloidosis. The modulators are also useful for the treatment of disorders associated with beta-amyloidosis, especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Amyloid beta peptide; Alzheimer's disease; polymerisation; aggregation; positron emission tomography; PET; Down's syndrome; amyloidosis.

Contracts AAW45962-6 represent a fragment of the amyloid beta peptide
KLVFF with an amino acid residue replaced with alanine. The invention
relates to the use of peptide compounds for inhibition of polymerisation
of amyloid beta peptide (ABP), as model substances for synthesis of ABP-
ligands for inhibition of polymerisation of ABP, as a tool for the
ligands for inhibition of polymerisation of ABP, as a tool for the
ligands for inhibition of polymerisation of ABP, as a tool for the
ligands for inhibition of polymerisation of ABP, as a tool for the
ligands in treatment of amyloidosis, especially in treatment of
Alzhamer's disease associated with amyloidosis, tor treatment or
prevention of demens in patients with Down's syndrome, for treatment or
prevention of hereditary createral haemorrhage with amyloidosis (Dutch
type) or for the prevention of fibril formation of human amyloid protein.
They can also be used for identifying other molecules with similar
properties and/or as ligands for detection of amyloid deposits using e.g.
position emission tomography. (Updated on 25-MAR-2003 to correct PI
                     Example 1, Fig 2C; 31pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 5 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAW45950
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         용

                                                                                                                                                                                                                                                                                                                                                   This is a partial sequence of the amyloid beta peptide which is critical for its polymerisation. The invention relates to the use of peptide (ABP), compounds for inhibition of polymerisation of amyloid beta peptide (ABP), compounds for inhibition of polymerisation of ABP-ligands for inhibition of compounds with similar functional properties, or as ligands in positron comparably. The peptides may be used in treatment of camyloidosis, especially in treatment of Alzheimer's disease associated with amyloidosis, especially in treatment of Alzheimer's disease associated with amyloidosis, for treatment or prevention of demens in patients with hammorrhage with amyloidosis (Dutch type) or for the prevention of fibril formation of human amyloid protein. They can also be used for identifying other molecules with similar properties and/or as ligands for detection of amyloid deposits using eg. positron emission tomography. positron emission tomography; PET; Down's syndrome; amyloidosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents a fragment of the amyloid beta peptide. The invention relates to the use of peptide compounds for inhibition of polymerisation of amyloid beta peptide (ABP), as model substances for synthesis of ABP-ligands for inhibition of polymerisation of ABP, as a tool for the identification of other organic compounds with similar

The compounds are novel chemical inducers of dimerization which are non-immunosuppressive and which are inhibitors of A-beta peptide aggregation and deposition in amyloid plaques. The adverse consequences of amyloid plaque formation can be prevented or ameliorated by sequestering the A-beta peptide in monomeric form with a conjugate which links the A-beta to cyclophilin or FKBP, therefore providing a
functional properties, or as ligands in positron emission tomography. The peptides may be used in treatment of amyloidosis, especially in treatment of Alzheimer's disease associated with amyloidosis, for treatment or prevention of demens in patients with Down's syndrome, for treatment or prevention of hereditary cerebral haemorrhage with amyloidosis (Dutch type) or for the prevention of fibril formation of human amyloid protein. They can also be used for identifying other molecules with similar properties and/or as ligands for detection of amyloid deposits using e.g. positron emission tomography. mechanism to minimize the amount of free A-beta available for fibril formation and deposition. The compounds can be used for the treatment of Alzheimer's disease, multiple sclerosis and amyotrophic lateral sclerosis
                                                                                                                                                                                                                                                                                                                                                                                                             Human; beta-amyloid peptide; Alzheimer's disease; amyloidogenic protein; aggregation; neurotoxicity; amyloidosis; Down's syndrome; cardiomyopathy; familial amyloid polyneuropathy; bovine spongiform encephalopathy; Creutzfeldt-Jakob disease; bAP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The bAP derivatives inhibit aggregation of amyloidogenic proteins and peptides, specifically bAP, and their neurotoxicity, so are useful for treating and preventing any disease involving amyloidosis, specifically Alzheimer's disease but also Down's syndrome, familial amyloid color polyneuropathy or cardiomyopathy, bovine spongiform encephalopathy and Creutzfeldt-Jakob disease. The bAP derivatives are also used to diagnose these diseases, in vitro or in vivo, by detecting binding of bAP to labelled bAP derivatives some bAP derivatives inhibit bAP aggregation even when bAP is present in molar excess. The present sequence represents a bAP derivative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes beta-amyloid peptide (bAP) derivatives
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New peptide(s) derived from beta-amyloid peptide that inhibit amyloid aggregation - and neurotoxicity, specifically for treatment and prevention of Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Benjamin H;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a beta-amyloid inhibitor peptide. Beta-amyloid inhibitors have neuroprotective and nootropic properties. The inhibitor peptides are useful for the treatment of Alzheimer's disease. The present sequence represents a beta-amyloid recognition peptide used in the exemplification of present invention

                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                             for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Peptides AAB48474-B48496 are antifibrillogenic agents that can be used for inhibiting amyloidosis and/or for cytoprotection. The peptides of AAB48474-B48496 cause the breakdown of amyloid deposits and are therefore useful for treating amyloidosis disorders such as Alzheimer's disease. Peptides AAB48474-B48496 were identified from the glycosaminoglycan binding region and the prot-prot interaction region of the human amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antifibrillogenic agent useful for inhibiting amyloidosis and/or for cytoprotection for treating amyloidosis disorders, comprises a peptide, its isomer or peptidomimetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nootropic; neuroprotective; antifibrillogenic; amyloidosis inhibition; cytoprotection; amyloid deposit degradation; amyloidosis disorder; Alzheimer's disease.
                                                                                                         Peptides AAB48474-B48496 are antifibrillogenic agents that can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The present sequence is that of an all-D peptide suitable for use in preparing vaccines for preventing or treating Alzheimer's disease and coher amyloid related disorders in humans. It is based on a portion of amyloid related disorders in humans. It is based on a portion of amyloid related disorders in humans. It is based on a portion of anyloid-beta peptide (see AAB8262), and may be modified by removing or inserting 1 or more amino acid residues, or by substituting 1 or more conditions and to the invention are produced using 1 or more fragments. Vaccines of the invention are produced using 1 or more conditions synthesised from the unnatural D-configuration amino acids to avoid the drawbacks of self' proteins. The all-D peptides need not be aggregated to be operative or immunogenic. They preferably interact with at least 1 region of an amyloid protein, e.g. the beta-sheet region or a GAG-binding site region, the amyloid-beta peptide, or their immunogenic fragments protein conjugates, immunogenic derivative peptides and immunogenic peptidemimetics. Examples include all-D peptides and immunogenic peptides and sasociated cellular toxicity. The amyloid of the value of iseases and be localised amyloidosis, e.g. diabetes type II, createrfeldt-Jakob diseases, e.g. bovine spongiform encephalitis, and created diseases, scrapie, cerebral amyloidosis associated with channatoid arthritis), familial Mediterranean fever (FMF) and systemic myloidosis for rheumatoid arthritis), familial Mediterranean fever (FMF) and systemic myloidosis patients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Preventing/treating amyloid-related disease, especially Alzheimer's disease, comprises administering antigenic all-D peptide, eg. as vaccine, which elicits production of antibodies to prevent fibrillogenesis and

The present sequence is that of an all-D peptide suitable for use for preparing vaccines for preventing or treating Alzheimer's disease and other amyloid related disorders in humans. It is based on a portion of amyloid-beta peptide (see AAB82622), and may be modified by removing or inserting 1 or more amino acid residues, or by substituting 1 or more amino acid residues or by substituting 1 or more amino acid residues or non-amino acid fragments. Vaccines of the invention acid residues or non-amino acid c fragments. Vaccines of the invention are produced using 'non-self' c peptides synthesised from the unnatural D-configuration amino acids to avoid the drawbacks of 'self' proteins. The all-D peptides need not be aggregated to be operative or immunogenic. They preferably interact with c at least 1 region of an amyloid protein, e.g. the beta-sheet region or C GAG-binding site region, the amyloid-beta peptide, or their immunogenic framents, protein conjugates, immunogenic derivative peptides and c corresponding to residues 1-42, 1-40, 1-35, 1-28, 1-7, 10-16, 16-21 and c corresponding to residues 1-42, 1-40, 1-35, 1-20, TH-1 response, c peptide amyloid-beta peptide and the all-D derivative peptides given to hams a second and associated cellular toxicity. The amyloid related diseases may be localised amyloidosis, e.g. diabetes type II, neurodegenerative diseases, e.g. bovine spongiform encephalitis,
                                                                                                                               ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Preventing/treating amyloid-related disease, especially Alzheimer's disease, comprises administering antigenic all-D peptide, eg. as vaccine, which elicits production of antibodies to prevent fibrillogenesis and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 07-JUN-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAB82629;
                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                          RESULT 30
                                                                                                                                                                                                                                                                                                                                                                                                                               AAB82629
```

```
This invention relates to a peptide containing Nalpha substituted alpha-D
amino acid residues optionally with Nalpha un substituted alpha-D amino
acids, which is capable of associating specifically with beta-strands
cormed by other protein or peptide molecules and there fore inhibiting
their aggregation into extended beta-sheets. The peptides exhibit
cheir aggregation into extended beta-sheets. The peptides exhibit
cheir aggregation into extended beta-sheets. The peptides is used for
antiparkinsonian, and cerebroprotective activity. The peptide is used for
inhibiting or reversing the aggregation of proteins or peptides in vivo
inhibiting or reversing the aggregation of proteins or peptides. The peptides can also be used for in vivo or inn
corrections or peptides into insoluble beta fibres. The diseases include
proteins or peptides into insoluble beta fibres. The diseases include
proteins or peptides or all Alzheimer's disease, Parkinson's disease,
prion-related encephalopathies e.g. bowine spongiform encephalopathy
(BSB) and its human forms Crentzfeldt-Jakob disease and kuru,
Huntington's disease, X-linked spinal and bulbar muscular atrophy,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chemical compound/composition for e.g. treating neurodegenerative diseases, comprises peptide comprising Nalpha substituted alpha-D-aminoacid residues which inhibit the aggregation of other proteins/peptides
                                                                                                                                                                                             Beta-amyloid peptide; beta-sheet formation inhibitor; neuroprotective;
                                                                                                                                                                                                              antidiabetic, nootropic, anticonvulsant; antiparkinsonian; BSE; Kuru, cerebroprotective; Alzheimer's disease; Parkinson's disease; bovine spongiform encephalopathy; Creutzfeldt-Jakob disease; Huntington's disease; muscular atrophy; spinocerebellar ataxia; type II diabetes mellitus; amyloidosis.
                                                                                                                                                         Residues 16-20 of beta-amyloid peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example 1; Page 42; 76pp; English.
                                   AAB62803 standard; peptide; 5 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      99GB-00017725.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 28-JUL-2000; 2000WO-GB002923

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Amyloid modulator useful for treating a disorder associated with amyloidosis, comprises an amyloidogenic protein and/or a peptide fragment coupled to a modifying group.
dentatorubral-pallidoluysian atrophy, and at least 5 genetically distinct
               forms of spinocerebellar ataxia, Non-neurodegenerative diseases such as type II diabetes mellitus, familial amyloidosis and dialysis-related amyloidosis. The present sequence represents a fragment of the Alzheimer's disease related beta-amyloid peptide. The peptide is used in an example illustrating the use of a peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes an amyloid modulator comprising an amyloidogenic protein and/or peptide fragment coupled to a modifying group so that the compound modulates the aggregation of natural amyloid proteins or peptides. The modulator is used for treating a disorder associated with amyloidosis e.g. familial amyloid polyneuropathy (Portuguese, Japanese and Swedish types), familial amyloid cardiomyopathy (Danish type), isolated cardiac amyloid, systemic senile amyloidosis, scrapie, bovine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Beta-amyloid; amyloid modulator; amyloidogenic protein; amyloidosis; familial amyloid polyneuropathy; familial amyloid cardiomyopathy; familial amyloid cardiomyopathy; solated cardiac amyloid; systemic senile amyloidosis; scrapie; myeloma; bovine spongiform encephalopathy; BSE; Creutzfeldt-Jakob disease; adult onset diabetes; Gerstmann-Straussler-Scheinker syndrome; insulinoma; atrial amyloidosis; idiopathic amyloidosis; haemodialysis; primary localised cutaneous nodular amyloidosis; Sjogren's syndrome; hereditary cerebral haemorrhage with amyloidosis; Sjogren's syndrome; hereditary non-neuropathic systemic amyloidosis;

diabetes, Geremman-Straussler-Scheinker syndrome, insulinoma, isolated atrial amyloidosis, idopathic (primary) amyloidosis, myeloma or macroglobulinaemia-associated amyloidosis, primary localised cutaneous condular amyloidosis, idopathic (primary) expressed cutaneous condular amyloidosis associated with Sjogren's syndrome, reactive condular amyloidosis, familial Mediterranean Fever and familial camyloid nephropathy with urticaria and deafness (Muckle-Wells syndrome), hereditary cerebral haemorrhage with amyloidosis of Icelandic type, camyloidosis associated with long term haemodialysis, hereditary non-reuropathic systemic amyloidosis (familial amyloidosis associated with III), familial amyloidosis of Finnish type, amyloidosis associated with computed systemic amyloidosis and inhibiting beta-mayloidosis. The compound is capable of altering and inhibiting beta-myloid protein (beta-AP) aggregation of natural amyloidosis. The compound is capable of altering and inhibiting beta-myloid protein (beta-AP) aggregation of natural amyloidosis. Crelative to the modulator. This sequence represents a fragment of the crelative to the modulator. This sequence represents a fragment of the long form of beta-amyloid used in the creation of an amyloid modulator.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention comprises an aggregation inhibitor of beta-amyloid protein (Abeta). The aggregation inhibitor of the invention has the sequence Lysteu-Val-Phe-Phe with a modified C-terminal of aspartyl-aspartyl (aminoethoxy) ethoxyacetic acid. The Abeta aggregation inhibitor of the invention is useful for the prevention, diagnosis and treatment of Alzheimer's disease. The present amino acid sequence represents the Abeta aggregation inhibitor peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    An aggregation inhibitor of beta-amyloid protein of sequence Lys-Leu-Val-Phe-Phe with modified C-terminal of aspartyl-aspartyl- (aminoethoxy)ethoxyacetic acid, for prevention, diagnosis and treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Abeta, beta-amyloid protein aggregation inhibitor, Alzheimer's disease, C-terminal aspartyl-aspartyl (aminoethoxy) ethoxyacetic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The present invention describes an amyloid modulator compound (I)

C comprising an aggregation core domain and a modifying group attached to

c it. (I) has nootropic, neuroprotective, immunosuppressive, antimicrobial,

c antidiabetic, antipyratic, dermatological, cardiovascular, nephrotropic

and auditory activities, and can be used as a natural amyloid aggregation

c inhibitor and a neurotoxicity inhibitor of natural bara amyloid peptide

c (beta-AP). (I) are used in the manufacture of a medicament for the

c diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's

c diagnosis or treatment of an amyloidogenic disease e.g. Alzheimer's

c disease and other clinical occurrences of beta amyloid deposition such as

cc haemorrhage with amyloidogis, and for treating a disorder associated with

c amyloidosis such as familial amyloid polymeuropathy. (I) reduces the

c toxicity of natural beta-AP aggregates to cultured neuronal cells. (I)

c toxicity to reduce the neurotoxicity of performed A-beta fibrils. The

c present sequence represents a peptide which is used in the

c exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Amyloid modulator compound useful for treatment of an amyloidogenic disease such as Alzheimer's disease comprises an aggregation core domain and a modifying group attached to it.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Beta amyloid peptide; beta-AP; beta amyloid precursor protein; A-beta; APP-770; amyloid aggregation; amyloidogenic; Alzheimer's disease; nootropic; neuroprotective; immunosuppressive; antimicrobial; auditory; antidiabetic; antipyretic; dermatological; cardiovascular; nephrotropic; amyloid aggregation inhibitor; neurotoxicity inhibitor; Down's syndrome; amyloidogenic disease; beta amyloid deposition; amyloidosis; hereditary cerebral haemorrhage; familial amyloid polyneuropathy.

RESULT 35

The present invention describes an amyloid modulator compound (I)

C comprising an aggregation core domain and a modifying group attached to

C comprising an aggregation core domain and a modifying group attached to

C antidiabletic, antipyratic, dermatological, cardiovascular, nephrotropic

and auditory activities, and can be used as a natural amyloid aggregation

CC inhibitor and a neurotoxicity inhibitor of natural bard amyloid aggregation

CC inhibitor and a neurotoxicity inhibitor of natural beta amyloid peptide

CC intractment of an amyloidogenic disease e.g. Alzheimer's

C disease and other clinical occurrences of beta amyloid deposition such as

CC disease and other clinical occurrences of beta amyloid deposition such as

CC homn's syndrome individuals and in patients with hereditary creebral

CC haemorrhage with amyloidosis, and for treating a disorder associated with

CC amyloidosis such as familial amyloid polymeuropathy. (I) reduces the

CC toxicity of natural beta-AP aggregates to cultured neuronal cells. (I)

CC toxicity to reduce the neurotoxicity of performed A-beta fibrils. The

CD ability to reduce the neurotoxicity of performed A-beta fibrils. The

CC exemplification of the present invention Example 11; Col 63; 54pp; English.

Amyloid modulator compound useful for treatment of an amyloidogenic disease such as Alzheimer's disease comprises an aggregation core domain and a modifying group attached to it.

encephalopathy (BSE), inflammation-associated amyloid, type II diabetes, primary amyloidosis, feline spongiform encephalopathy, non-transmissible ecebral amyloidosis, Alzheimer's disease, prion-mediated diseases, disease, related amyloidosis, Ilight chain-related amyloidosis, cerebral amyloid angiopathy. The agents are capable of crossing the blood-brain barier and are capable of binding specifically to amyloid plaques. The agent sequence is a peptide forming the amyloid targeting moiety of the agent of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an amyloid-targeting imaging agent comprising an amyloid targeting moiety, a linker moiety and a labelling moiety. The spent is of general formula A_{\perp} \cdot (A_{\perp} \ln k^{1}) z \cdot A_{\perp} = b (1) where z = 0 - 1; A_{\perp} = a mamyloid targeting moiety, A_{\perp} = a linker moiety, and A_{\perp} = a labelling moiety, Also included are imaging amyloid deposition or administering an amyloid-related condition in a patient involving administering (1) to the presence of amyloid or amyloid-related condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New amyloid-targeting imaging agents useful for in vivo imaging amyloid plaques and/or for the treatment of amyloidosis disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Amyloid; imaging agent; Creutzfeldt-Jakob disease; Kuru; CJD; transmisable cerebral amyloidosis; transmisable virus dementia; scrapie; transmisable mink encephalopathy; BSE; type II diabetes; bovine spongiform encephalopathy; inflammation associated amyloidosis; felline spongiform encephalopathy; Alzheimer's disease; ption-mediated disease; blood-brain barrier; dialysis-related amyloidosis; light chain-related amyloidosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ..

```
(I), a reducing agent, a buffering agent, a transchelating agent, and a kit for preparing a radiopharmaceutical preparation comprising constitutions for the preparation and use of the radiopharmaceutical in the imaging of amyloid or an amyloid-related condition. The agents are used for imaging amyloid deposition and for diagnosing an amyloid related condition and for diagnosing an amyloid related amyloid amyloid deposition and for diagnosing an amyloid related condition e.g. Creutzfeldt-Jakob disease (UD), kuru, transmissible creapis, transmissible mink encephalopathy, bovine spongiform creapis, transmissible mink encephalopathy, bovine spongiform primary amyloidosis, feline spongiform encephalopathy, non-transmissible created amyloid type II diabetes, primary amyloidosis, feline spongiform encephalopathy, non-transmissible created amyloidosis, feline spongiform encephalopathy, non-transmissible created amyloidosis, refebral amyloidosis, light chain-related amyloidosis, creebral and are capable of binding specifically to amyloid plaques. The present sequence is a peptide forming the amyloid targeting moiety of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Transglutaminase inhibitor; Factor XIII inhibitor; XIIIa inhibitor; ophthalmological; antinflammatory; antirheumatic; antiarthritic; thrombolytic; neuroprotective; nootropic; antiseborrheic; dermatological; cytostatic; anti-HIV; antipsoriatic; cataract; inflammatory disease; arthritis; thrombosis; Alzheimer's disease; Huntington's chorea; acne; cancer; HIV infection; psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes novel amino acid or peptide derivatives or analogues (I), containing a modified side-chain (e.g. containing a formyl group) which are transglutaminase inhibitors and Factor XIII/XIIIa inhibitors. The products of the invention have ophthalmological, antiinflammatory, antirheumatic, antiarthritic, thrombolytic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New amino acid or peptide derivatives or analogs, are selective transglutaminase inhibitors useful e.g. for treating cataract, inflammatory diseases, rheumatoid arthritis, thrombosis, Alzheimer's disease and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

cartifity and antipsoriation activity. (I) are transglutaminase inhibitors, mentifity and antipsoriation activity. (I) are transglutaminase inhibitors, cespecially inhibitors of crosslinking of proteins or peptides processed and peptides, processed activity of glutamine residues bound in proceins or peptides, blood factor XIII/XIII and mammalian, human, tissue, liver, brain, eye lens, keratinocyte, epidermal, proceste, plant, parasitic and/or bacterial transglutaminases. The products of the invention can be used of for treating actaract, inflammatory diseases, theumatoid arthritis, chrombosis, Alzeaimer's disease, Huntington's chora, cene, cancer (by induction of apoptosis), HIV infections and psoriasis. (I) Are targeted and specific transglutaminase inhibitors, which can inhibit a specific type of transglutaminase in the human or animal body without affecting other transglutaminases. ABB84001-ABB84049 represent transglutaminase in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a new method of inhibiting cerebral amyloid angiopathy. The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid angiopathy, particularly Alzheimer's disease, hereditary cerebral haemorrhage with amyloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU11910 & AAU11911) that were used in the invention as a carrier for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor
                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Amyloid-beta40 inhibitor; Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nociropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Peptide #8, used as a carrier for the amyloid-beta40 (Abeta40) inhibitor.

The new method of the invention involves contacting a blood vessel wall cell with an amyloid-beta40 inhibitor. The invention can be used for treating disease states characterised by cerebral amyloid haemorrhage of the myloidosis of the Dutch type and haemorrhagic stroke. The present sequence represents one of a group of peptides (AAU11648-AAU11669, AAU11910 & AAU11911) that were used in the invention as a carief for the amyloid-beta40 (Abeta40) inhibitor. The Abeta40 inhibitor cerebral amyloid anglopathy (CAA)
                                                                                                                                                                                                                                                                                                                                                           Amyloid-beta40 inhibitor, Abeta40 inhibitor; cerebral amyloid angiopathy; CAA; nootropic; neuroprotective; cerebroprotective; Alzheimer's disease; cerebral haemorrhage; amyloidosis; haemorrhagic stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Inhibiting cerebral amyloid angiopathy used for treating e.g. Alzheimer's disease comprises contacting blood vessel wall cell with amyloid-beta 40
                                                                                                                                                                                                                                                                                                                                 used as carrier for the amyloid-beta40 (Abeta40) inhibitor.
                                                                                                         Gaps
was used in the invention to treat a disease state characterised by cerebral amyloid angiopathy (CAA)
                                                                                                         ö
                                                                          Score 19; DB 5; Length 5; Pred. No. 1.8e+06; O; Mismatches 0; Indels

The invention relates to a peptide (I) inhibiting fibrillogenesis, that comprises a beta-strand with two faces, where the first face has hydrogen bonds, and the second face blocks or disrupts propagation of hydrogen conding between beta-strands needed to form fibrils. (I) is useful for inhibiting fibrillogenesis, for detecting fibrils in a subject and for composition comprising (I) is useful for inhibiting associated with pathological states such as Alzheimer's disease, composition comprising (I) is useful for inhibiting or diseasembling fibrils associated with pathological states such as Alzheimer's disease, composition comprising (I) is useful for inhibiting or diseasembling fibrils associated with pathological states such as Alzheimer's disease, composition comprising, familial Mediterranean fever, familial amyloid cardiomypathy with utricaria and deafeness, Muckle-Wells syndrome, compressing marcroglobulinemia-associated myslome, familial amyloid cardiomypathy, isolated cardiac amyloid polymeuropathy, familial amyloid cardiomypathy, isolated cardiac amyloid polymeuropathy, scrapie, didult onset diabetes, insulial amyloid cardiomoses, hereditary cerebral haemorinage with amyloidosis, familial camyloidosis, hereditare syndrome, bovine spongiform encephalitis, prionsendated diseases, or Huntingforn's disease. (I) is useful for treating a subject which is a mammal, preferably human, having protein aggregation disease or protein misfolding disease. The composition is useful in both preventive and curative therapies of fibril based pathologies mentioned cabove. The present sequence represents a peptide from the core domain of beta-amyloid, and can inhibit Abeta fibrillogenesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel peptide for inhibiting fibrillogenesis, and for screening fibrillogenesis inhibitors, has beta-strand with one face having hydrogen bonds and other face blocking propagation of hydrogen bonding between

The method is used for preventing and/or treating and/ord-beta in a manmal and angiopathy; for altering serum levels of amyloid-beta in a mammal and cangiopathy; for altering serum levels of amyloid-beta in a mammal and favours the clearance of soluble amyloid-beta in a mammal and carbonary diseases e.g. rheumatoid arthritis amyloid-beta from the mammal; and reducing or inhibiting the formation of plaques. It is also used for treating AA (reactive) amyloid diseases including arthritis, juvenile chronic arthritis, ankylosing spondylitis, psoriasis, psoriatic arthropathy, Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's disease. AA deposits are also produced as a result of chronic microbial infections (preferably leprosy, tuberculosis, bronchiectasis, decubitus ulcers, chronic pyelonephritis, orselve in AA tibril amyloid deposits controling Hodgkin's lymphoma, renal carcinoma, carcinomas of gut, lung and urogenital tract, basal cell carcinoma and hairy cell leukaemia. The present sequence is an Abeta peptide used to illustrate the method of the

The invention relates to a method for prevention and/or treatment of an all-D-
amyloid-related disease which comprises administration of an all-D-
amyloid-beta peptide. The method is used for preventing and/or treating
CC Alzheimer's and other amyloid related disease e.g. cerebral amyloid
Alzheimer's and other amyloid related disease e.g. cerebral amyloid
CC Alzheimer's and other amyloid related disease e.g. cerebral amyloid
CC favours the clearance of soluble amyloid-beta in a mammal and
CC favours the clearance of soluble amyloid-beta in a mammal, and reducing or inhibiting the formation of plaques. It is
CC also used for treating AA (reactive) amyloid diseases including
CC arthritis, ankylosing spondylitis, psoriasi, psoriatic arthropathy,
CR Reiter's syndrome, Adult Still's disease, Bechet's syndrome and Crohn's
CR Giesase. AA deposite are also produced as a result of chronic microbial
CC infections (preferably leprosy, tuberculosis, bronchiectsais, decubius
CC ulcers, chronic pyelonephritis, osteomyelitis and Whipple's disease).
CC certain malignant neoplasms can also result in AA fibril amyloid deposits
                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     All-D-amyloid-beta peptide; Alzheimer's disease; rheumatoid arthritis; cerebral amyloid angiopathy; amyloid disease; ankylosing spondylitis; psoriasis; Reiter's syndrome; Adult Still's disease; Bechet's syndrome; Crohn's disease; infection; leprosy; tuberculosis; carcinoma; nootropic; chronic pyelonephritis; osteomyelitis; Whipple's disease; vasotropic; Hodgkin's lymphoma; neuroprotective; bronchiectasis; ophthalmological; ulcer; antiinflammatory; cytostatic; uropathic; therapy.

aggregation of beta-amyloid protein (ADP60932). The peptide inhibitor has a C-terminus which is modified with hydrophilic ether groups having an an C-terminus which is modified with hydrophilic ether groups having an amino group and a carboxyl group at the ends of the molecule (e.g., poly(aminoethoxy) ethoxyacetic acids). The C-terminally modified peptide inhibitor inhibits the aggregation of beta-amyloid protein (fibril formation), thereby preventing the death of neural cells. The inhibitor is useful in the prevention, treatment, and diagnosis of Alzheimer's disease. The present sequence represents the amino acid sequence of the C-terminally modified inhibitor of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptides whose carboxyl terminal is modified with hydrophilic groups, are useful as inhibitors for aggregation of beta-amyloid protein and are used in the treatment of Alzheimer's.
                                                                                                                                                                     Beta-amyloid protein; aggregation inhibitor; fibril formation inhibitor; peptide inhibitor; C-terminal modification; hydrophilic ether group; poly (aminoethoxy)ethoxyactic acid; neural cell; Alzheimer's disease; nootropic; neuroprotective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Prion; PrPSC; prions protein; transmissible spongiform encephalopathy.

The compound interferes with formation of fibril from beta-amyloid peptide effecting an inhibition of disease process. It is useful for diagnosing and treating Alzheimer's disease in mammals, especially a human. The present sequence represents a beta-amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Chemical compound for use in diagnosing or treating Alzheimer's disease, comprises multiple copies of a plaque-recognition peptide and is capable of crossing blood brain-barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a chemical compound for use in diagnosing or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                             The present invention relates to a method for detecting pathologically altered prion proteins (PrPsc), which comprises incubating a test sample with a solid carrier to which an agent is able to bind, removing unbound proteins, and detecting proteins bound to the agent. The method is used to diagnose transmissible spongiform encephalopathies in live animals, even shortly after infection. The present sequence is a PrPsC peptide used to demonstrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diabetes; insulinoma; myeloma; Sjogren's syndrome; familial mediterranean fever; urticaria; deafness; hereditary cerebral hemorrhage; haemodialysis; thyroid; renal amyloidosis; lysozyme-associated hereditary systemic amyloidosis; beta-amyloid peptide; human.
                                                                                                                                                                Detecting pathological prions in live animals, useful for diagnosis of transmissible spongiform encephalopathy, using immobilized agent that binds to beta-sheets.
                                                                                                                                                                                                                                                                                                                                                          Gaps

The invention relates to amyloidogenic proteins or peptide fragments aggregation modulators. The invention is used for treating disorder associated with amyloidosis, particularly familial amyloid polyneuropathy (C contesses, decident amyloid cardiomyopathy) associated cardiac amyloid, systemic senile amyloidosis, corapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, corapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, corapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, corapie, myeloma or macroglobulinemia-associated amyloidosis, myeloma or macroglobulinemia-associated amyloidosis, primary amyloidosis, myeloma or macroglobulinemia-associated which Sjogram's coralized cutaneous nodular amyloidosis, familial Mediterranean Pever and familial amyloid nephropathy with urticaria and deafness (Mucklewells syndrome), hereditary cerebral haemorrhage with amyloidosis of columnial amyloidosis associated with amyloidosis of polyneuropathy III), familial amyloidosis (familial amyloidosis) associated with medullary carcinoma of the thyroid, fibrinogen associated associated hereditary renal amyloidosis and lysozyme-associated hereditary systemic amyloidosis. The present sequence is beta-amyloid peptide fragment used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Amyloidogenic protein; therapy; amyloidosis; familial amyloid polyneuropathy; cardiomyopathy; systemic senile amyloidosis; bovine spondiform encephalopathy; systemic senile amyloidosis; bovine spondiform encephalopathy; Creutzfeldt-Jakob disease; Gerstmann-Straussler-Scheinker syndrome; diabetes; insulianoma; myoloma; Sjogren's syndrome; familial mediterranean fever; urticaria; deafness; hereditary cerebral haemorrhage, haemodialysis; thyroid; renal amyloidosis; lysozyme-associated hereditary systemic amyloidosis; beta-amyloid peptide; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           New amyloidogenic protein aggregation modulators useful for treating disorder associated with amyloidosis e.g. familial amyloid polyneuropathy, Creutzfeldt-Jakob disease and adult onset diabetes.

                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to amyloidogenic proteins or peptide fragments aggregation modulators. The invention is used for treating disorder aggregation modulators. The invention is used for treating disorder aggregation modulators. The invention is used for treating disorder associated with amyloidosis, batterial amyloid cardiomyopathy (Portuguese, Japanese and Swedish types), familial amyloid cardiomyopathy, Constituted amyloidosis, carapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, Gersapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, Gersapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, Gersapie, bovine spongiform encephalopathy, Creutzfeldt-Jakob disease, Constitutiona, isolated atrial amyloidosis, idiopathic (primary) amyloidosis, myeloma or macroglobulinemia-associated with Sjogran's syndrome, reactive (secondary) amyloidosis, familial Mediterranean Fever and familial amyloid nephropathy with urticaria and deafness (Mucklewells syndrome), hereditary cerebral haemorrhage with amyloidosis of clelandic type, amyloidosis associated with long term haemocialysis, hereditary non-neuropathic systemic amyloidosis of Finnish type, amyloidosis of Pinnish type, amyloidosis of Pinnish type, amyloidosis associated with medullary carcinoma of the thyroid, fibringen associated hereditary renal amyloidosis and lysozyme-associated hereditary systemic camyloidosis. The present sequence is beta-amyloid peptide fragment used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The present invention relates to a new pharmaceutical composition comprising amyloid beta-derived diffusable ligands (ADDLs) capable of generating an immune response in a host organism, where the composition is a vaccine or a composition entition or a composition or antigenic, immunogenic or act as a binding molecule when the composition is administered to a host organism. The composition, vaccine or antibodies are useful in inducing an immune response. The composition, peptides, molecules and antibodies are useful in preventing or peptides, molecules and natibodies are useful in preventing or degeneration or malfunction of neurons and in preventing or treating degeneration or malfunction of neurons and in preventing or treating Down's syndrome. The present sequence is a polypeptide shown in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New amyloid beta-derived diffusable ligands, useful in generating an immune response and in preventing, ameliorating or treating Alzheimer's disease, memory and learning deficits, degeneration or malfunction of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              spherical nanostructure; tubular nanostructure; field emitter device; nanoscale environment; electron emission lithography; memory cell; mechanical transmission device; electronic inverter; heat transfer device; electron emission; beta-amyloid; central aromatic core structure; nanotube self-assembly; Alzheimer's disease; beta-amyloid core recognition element.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
immunostimulant; neuroprotective; nootropic; Alzheimer's disease; Down's syndrome; vaccine; amyloid beta; ADDL; amyloid beta-derived diffusable ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
